Ye I think the steam update has messed with everyone lol I can't even get into css any more, I get the valve cinematic's when I load and then when it is about to give me the find server buttons it say Connect on replay.dll failed

Why do valve have to implement these stupid updates 🙄

Yo

just delete your "bin" dir under C:Program Files
(x86)Steamsteamapps\YOUR-ID\counter-strike source and re-run steam and connect to a
server

you will then get server running old version unless they have updated 🙄
