

## need help!

Posted by xciting - 14 Oct 2011 13:03

---

i updated steam, and now counterstrike is crashing all the time.

error: couldnt load replay.dll

i need your help, where's the problem? 🙄

Everyone is getting right now. 🙄  
people say i can delete your bin to make it work but i dont want to risk that 🙄

delete my bin?

never 🙄

what is that for an update ffs ?

🙄

the update is for the 7th pixel in the ak, they thought it was too grey, so it is now less grey...

i dunno lol 🙄  
but as always it will make no difference at all for much hassle 🙄

backup the bin dir if you are worried, but it only contains .dll files

and when you restart and connect to a server it refreshs and replaces the files

shutdown steam

cd C:\Program Files (x86)\Steam\steamapps\your-user-id\counter-strike source

mv bin bin.old

start steam

connect to a server

what you'll now find is that some servers need updating to the latest to enable you to connect

Cheers

Shoot ME

m8s, to fix the problem do the following steps:

went to steamapps/username/counterstrikesource/bin

deleted replay.dll

then right click cs:s in steam and went to properties

local files tab and click

Verify Intergrity Of Game Cache

The game is now running fine no errors.
