Hello 😊

I been playing on your server for a little bit now about a week or so but all of a sudden today i have tried to use races that involve pressing "4" on the list but it just wont do anything i can type it and everything but i cant choose a listing from the list wether im nominating, voting, wcsmenu, buying exp and most annoyingly changing a race...!

If anyone could help with this problem would very much appreciate it. ive tried restarting computer and everything but just nothing its just not working. I was wondering perhaps if i was able to do a console command to changerace but i dont know enough about it to be honest.

Thanksyou for now 😊

you can control all menus via your console as well..

just type: say changerace; menuselect 4

or whatever race you want ;P its kinda nice to have some keys binded to different races^^

say changerace; menuselect 9; menuselect 9; menuselect 9; menuselect 9; menuselect 9; menuselect 9; menuselect 9; menuselect 9; menuselect 5

Thats gonna be a bitch.... rofl..not sure how many ppl are keen on the first page of crap races

but once it's bound that's it, just press 5 and you've got the 189th race on the server selected! Alot quicker than going through all those bloody pages
