Tbh I don't see the need to swear, just use a different word 🙄  
Its not that hard. or just right it like this →

no offence but writing \*\*\*\* is just strange. and fair enough theres no need to swear but most people do it nevertheless and its pretty annoying when i go to type &quot;aww u bitch 🙄&quot; and get &quot;your parents havnt raised your nooby self right&quot; or something retarded like that. but ooooooooooh fkin well 🙄

Yeah, it annoyed me a bit. I wouldn't mind if it just censored the individual words, but discarding your whole sentence and coming up with a stupid sentence in its place is frustrating, especially if you write a long sentence and it's all gone and have to type it again. Also, the filter is pretty sensitive and catches normal/slang/shortened words as swearing

Like I said use another word 🙄  
Don't bother typing a long sentence and filling it with swear words 🙄  
You know that it is going to censor them if you do 🙄

..

Im afraid I also have to agree with Substick on this one guys. You already know what it does when you swear... so simple answer is not to swear. Or if you do... be prepared to take a witty comment in its place. 🙄
