Cheers for the continued support for the server and listing some more maps. I'm going to struggle to get these uploaded before Sunday as quite busy tonight and tomorrow.

If you notice any that don't work of the current lot, please post here and I'll sort them. For the moment, I'll remove those three that have newer versions.

Another suggestion:

Its bugging me now since I joined the server.. please remove the bhop script!

Its certainly true that you can cheat through some lvls with it but it makes like 50% of all maps MUCH harder since bhops arent meant to give you such a huge boost.. it even makes some lvls impossible!

But I guess some starters like to have this boosts as it really can help sometimes..

so my idea is to make the boost an option which can be turned off or on with a chat command.

I'll have a look tonight when I get home from work. I think might be better to remove it. I'll see if there is one that is off by default but can be enabled as you suggest.

The script shouldn't be the problem... gotta admit that I didn't code CSS related stuff for like over half a year but it should be basically this -> *OLD*

I didn't test it and I didn't know about your `lj cvars`.. but if I spend some time getting used to pawn again I think I can make the script working!
