

No Block

Posted by Chifilly - 05 May 2011 16:59

My sssugggestion is to put No Block on the WCS server. It's SO frustrating when people get in your way when you're about to die, and also the reason you die is because someone was in the way. I think adding it would releave a WHOLE lot of stress from playing on small maps, and even most maps really

I think we had it for 2 days but than it broke for some reason.

is noblock just for teammates? because i wouldnt like the idea of trying to knife someone and just running through them by accident

Noblock is for everyone and yea that's the one sideeffect noblock has and that's the knifing but you'll get used to that. I'm sure your good enough to even let that be a problem 🤔

Ofcourse we don't have it yet, hehe.

yea obviously lol 😏
, but we shall see if its installed again 😏

Yeah, if it's been disabled it'll need re-loading on the server

Personally I dislike no block

I can put it back one, once the server is more stable.

Biggest issue now is, that Csx is a pretty old game, there aren't many "new" mods on the market anymore, so most of the noblock plugins are broken (thanks to the repeated valve updates)

but i agree that it would be a good thing to have it on the server

if not a permanent thing, then just a client based command i.e. !block so clients can choose whether to be tangible or not

I think the !block command would be an awesome idea because then if you do get stuck you can get yourself unstuck but you don't have permanent no block 😊
