

## About the BF3 release

Posted by Demon1c - 11 Oct 2011 11:37

---

So, super excited to see what the final product of BF3 will be, played the Beta and it was awesome (mostly).

Need to upgrade my comp, and since I'm with this PC like some suggestions on a good graphics card (since I should be fine with my dual core I'm gonna try to save some money and not upgrade it right away, if the game doesn't run smoothly then I'll buy a new processor as well).

So, hit me up with suggestions

=====

I use the nVidia GeForce GTX 560 with 1G of memory and it have worked fine so far. The suggestion is not to spend too much on a graph card as it is the one thing you will change first in a comp and the thing that gets outdated first, usualy

Currently im using EVGA GeForce GTX 580 1536MB 384-bit

[www.newegg.com/Product/Product.aspx?Item=N82E16814130595](http://www.newegg.com/Product/Product.aspx?Item=N82E16814130595)

Its really good and i was playing the beta on high

Really amazing graphics really recommended

People say this card is much better and runs battlefield on max:

[www.newegg.com/Product/Product.aspx?Item=N82E16814130587](http://www.newegg.com/Product/Product.aspx?Item=N82E16814130587)

Wont buy it though ill stay with mine for a while 🙄

Btw

They said the beta graphics were lower then when the game will once it comes out

so if you were playing the beta on high for example then once the game comes out it will be like medium on it 🙄

Read about it on the forum dont have the link though 🙄

Edit:

If you want to but a graphic card make sure you have enough ram to run Battlefield 3 or any other game on the quality you want.

Really stupid to buy a card to play Battlefield 3 on maximum settings when you will crash every 5 minutes because you run out of memory(ram, same shit :3) 🙄

If you're looking for value, I'd side with Johannicus on this one:

[www.ebuyer.com/267865-gigabyte-gtx-560-o...aphics-gv-n56goc-1gi](http://www.ebuyer.com/267865-gigabyte-gtx-560-o...aphics-gv-n56goc-1gi)

Very good graphics card, easily run BF3 on high I recon.

OR

[www.ebuyer.com/255421-gigabyte-gt-440-oc...aphics-gv-n440d3-1gi](http://www.ebuyer.com/255421-gigabyte-gt-440-oc...aphics-gv-n440d3-1gi)

Will probably run it fine on med if you have a good processor.

EDIT: Just re-read, I realise you're processor is not good... Probably run it on low very well then xP But might still do med, wouldn't surprise me.

Booo its cheep 🙄

I never trust those 🙄

Not sure what you mean, e-buyer is more than reliable, bought my whole PC from there. He is obviously going for a good but cheap graphics card, so those are my suggestions. Plus there is not a whole lot of difference between the 560 and the 580, at least not what the price gap is worth.

Well, actually I don't mind spending a few cash on a good graphicscard. 🍷
