

Minecraft server updated to 1.6.4

Posted by Tunes - 26 May 2011 14:37

Hello minecrafters, well Notch did it again and as usual everything messes up on each update.

The server is up with version 1.6.4 AND plugins, but beware is using a very unstable craftbukkit version and anything can happen.

By any means, please, if you get disconnected, map crash or something else, please post in this thread so I can look it up.

I'll keep an eye on the server during my regular 18 hours of my computing day.

Thanks for everyone playing there and making awesome contraptions 🙄

And BTW (yes, I'm REALLY spam posting to REALLY get my post count high) 🙄

I think nether portals now work, I cannot test them atm....

Nether is completely anarchist with no permission definitions... so, you are all on your own.

Going to get testing 🙄

EDIT: When you spawn, you just spazz out and can't move or look around.

Along with the spazzing, you get kicked after a bit anyway with "End of stream" error

Nvm, it helped a bit but it still loads the world sloooooooooow. I hope they fix it soon so Tunes can update it too 😞

I wouldn't have been able to keep the Render Distance higher anyway, because it eats my computers CPU (and it's not amazing to begin with 🤔) and I think the fan's broken so it heats up quickly too

will join and see what's up with it, modders are still working on the subject, as I stated, its a very very early release for 1.6.4 (in fact, the first)
