

Compromised Minecraft accounts

Posted by Tunes - 24 Jul 2011 22:41

Well, sometimes people use the wrong mods, so, better at least take a look if your is in a black list

dinnerbone.com/minecraft/compromises/

Remember, not being there, does not mean you are safe. Change the password.

Also deleting the client and apply only the well known mods (zombe, worldedit) does help to get "protected".
