

SSP to SMP builds

Posted by Chifilly - 13 Feb 2012 02:04

Well, I was wondering if I build something in single player, would you be able to transfer it to from my save to the server? I was thinking of something cool that could be put at spawn and could add a bit more community feel to the place (the idea itself is a secret at the moment 😊)

as a mod, you can now build in spawn 😊
just ask me for whatever you need to build 😊

Which ever way you go around doing it, I hope it appears soon.. it is killing me knowing there is something, but not what it is 😊

Well, the only thing is, I've already built it in single player, and took about 4 hours in total, so I cannot be arsed to build it again (and if I did, it would end up being half built a lot of the time, and uses a huge amount of resources 😊)

The only way, give me the map and I'll import them into the smp map.

Okay, will do when I go back on my PC (on my laptop at the moment)

Just a note, I made it to the dimensions of the empty area next to the auto pig cooker and minecart rollercoaster thing (29x33 I think) and you'll also need to copy the blocks below ground too (got some redstone circuitry there) I think when you see it, it'll be obvious what it's for 🤔

Here's the link: www.mediafire.com/?1ayr76uwramzx81

Just another note, the front door won't work, and that's how it's supposed to be (I'll show people how it'll work and what it's for when it's on the server 🤔)

No-one gonna give feedback? 🤔
4 people have downloaded it
