

Added skyblock plugin

Posted by Tunes - 20 Dec 2012 22:06

Hello fellow minecraft players!

Today I've added a new plugin to our survival server, that being, it's Skyblock!

It's only available to TWK-R players to avoid it getting spammed by the usual occasional newcomers.

It's possible to create a party of up to 4 players!

PVP is disabled inside the island but enabled outside the 100 block boundary

The list of commands is pretty simple;

Create or comeback to your island

`/island`

Restart your own island

`/island restart`

Get your own island information or others

`/island info`

Get island topten

`/island topten`

Lock/Unlock island, this will prevent anyone from entering the worldguard protection

/island lock

Party commands;

/island invite invite a player duh 🤔

/island kick guess what?

/island makeleader (give leadership to other player)

/island partylist list all parties

That's all folks, hope you have all the fun and compete for the best island! 🤖

There is no config for topen, so it must be a plugin hardcode and cannot be changed.

we need a way to remove people from our islands. you can lock and unlock it. that stops them from moving but it does not remove them. having pvp on might help fix this but it could start other problems

I think you can kick people out the island party.

I decided to research into he plugin a few days ago and found that admins can update the top ten manually using "/dev topten",. (Just saying.)

Yeah, forgot abt the dev commands 🙄
Soob, just do it
