

Getting scammed

Posted by Casores - 16 Aug 2012 01:36

As the title mentions i got scammed, by a player named Alazylemur.

We went for a trade since we needed books and he needed slimeballs. Since there is no decent trading system in minecraft i decided to go first and toss him the 40 slimeballs, in which he was in return going to give me the 40 books, but when i gave him the slime he /f homed immediatly

I know he was my enemy and i never talked to him or interacted in any other way with him. but i decided to give him the advantage of the doubt.

now i know there is no rule against being a scumbag without any sort of decency but i still think there has to be something against this injustice

mvg Casores

Also, I'll have to talk to other Admins about this, but I think there was a rule that disallowed scamming, but I could be wrong

Unless you or the witness has solid evidence in either screenshots or video then unfortunately we cannot pursue this issue.

Sorry for any inconvenience

VooDoo.

my 2 cents:

In my opinion, there should be no rules against this.

We are a factions server. Being a dishonest person is a viable part of the game. Therefor, if you get scammed by someone you are fully capable of just declaring war and hunting them down.

There should be no intervention on staff's part should a player decide to tarnish their reputation.

Of course this is just my opinion.
