

Items are acting wonky...

Posted by Postal291 - 18 Dec 2012 20:16

Majority of the time when I try to pick an item up that is on the ground, it goes straight to my feet slot, overwriting whatever was there. This also counts for dropping items.

To add to this, whenever you die, all your items don't drop, they just disappear.

The server is unplayable for those experiencing this glitch. I've already lost some significant armor, weapons, tools and (LOADS) of blocks and other items.

Thank you for reporting this issue. It has happened to me also.

I thought it might only be me and some random issue...

I've removed Postal's and Rena's user files, for some reason they got corrupt due to some plugin conflict.

Please login and see if it is fixed.

Sorry folks.

nooooooooooooooooooooooo my poor ender chest items 🙄

and i was so close to a full stack of diamond blocks but thanks tunes it seems to work now i think steve had this problem too

Tell me what you lost, and I will replace it. Sorry, something really bad happened the other day with plugin conflicts... sorry. Should have tested them first in the test server.
