

Creative Server Multiple homes

Posted by VooDoo - 19 Jul 2011 19:26

I would love to be able to do /sethome1, /sethome2, /sethome3 or maybe even the ability to set your own teleport destinations on the creative server, would come much in handy and if its possible would be an amazing addition to the server 😊

Thanks for the suggestion, I'll see what I can do about this!

Cheers

For SMP server, go [here](#) .

For Build server, go [here](#) .

Substick, suck my big toe! 🤔

I was trying to "legally" install Microsoft Office (since my old version died on me) but it wasn't going so well xD

Ok, added the plugin to the server

Small help on it:

/home - Teleport you to your default home location
/home - Teleport to a named home location
/sethome - Set your default home location
/sethome - Set a named home location
/deletehome - Delete named home location.
/listhomes - List home locations for yourself.
/invitehome {[*]} - Invite another user (use ""*" for global invite) to your default home location.
/invitehome {[*]} - Invite another user (use ""*" for global invite) to your named home location.
/invitehometimed {[*]} - Invite another user (use ""*" for global invite) to your default home for a short time.
/invitehometimed {[*]} - Invite another user (use ""*" for global invite) to your named home for a short time.
/uninvitehome {[*]} - Retract invitation for another player to visit your default home.

/uninvitehome {*} - Retract invitation for another player to visit your named home.
/listinvites - List invites open to you.
/listmyinvites - List invites you have open to others.

I think thats all! Give it a spin and tell if it works fine!
