Creative Server Multiple homes

_____

I would love to be able to do /sethome1, /sethome2, /sethome3 or maybe even the ability to set your own teleport destinations on the creative server, would come much in handy and if its possible would be an amazing addition to the server

Just testing this out, and it says I don't have access to the command

I went to check your perms, you should have access, since even builders have access to it...

_____

I've tried /sethome, /sethome house, /sethome 1, and they don't work, and also /home doesn't work (from when I could use the command before) it just says I don't have access to the command

And on another note, the spawn has been griefed. A lot of fire and a big lava pillar in the middle of it

EDIT: Scratch that, the extent of the damage is more than spawn. There's fire near my house too, and god knows where else, and lava everywhere too
