i shall colonize all of europe!

this would be quite amazing to use as a multiplayer server. different people in control of different areas/regions/countries/continents. they are only allowed mine in their own territory, unless allowed by others. you trade resources,(maybe with minecarts, y'now, the ones with chests and powered ones to push em along), the stuff you have extra of to people who need it or buy things you need off people. sell people things you have. wage war with people. (perhaps multiple people in each continent so have armies or sumtin) or form alliances. 🤔

that would be awesome
