Need help pl0x!

Posted by deN - 25 Jan 2011 13:45

_____

So a while back, i downloaded a gui for my source and i followed the steps correctly, but something went wrong, and the background didnt change and the skins on the ppl in-game got totally bugged! CTs r the blue ones with helmet - the glass thing in front of their faces and Ts r all arctic -.-

so basically, just wondering how i can remove the gui skin and get the old one back?

NOx

_____

if you wanna be lazy:

copy your maps folder and put in a safe place.

delete cstrike.

open css.

paste maps into cstrike.

_____

Yeap, just save the maps, or in my case I backup them, but never put them again, delete the cstrike and get a new download...
