

site speed

Posted by Tunes - 20 Dec 2011 01:32

Well, had to rollback to a database from saturday, prior to the migration, for some reason, things were messed up a bit, so not much is loss, sorry for the inconvenience... 😞
but really had no other method.

so looks like everything is fixed, at least what I've tested, looks fine

However, CS:S server still need reconfig...

And the fb like button works again.. so please.. 😊

good job tunes 😊

i hope the reconfig won't pass out of mind ! 😊

Well, Noticed CS:S are dumping logs into the new server, thanks for whoever done it, there were some issues today which I think are solved.

There will be some other modifications soon (around January) to take advantage of the new machines I now have to host stuff.

BTW, if someone needs hosting services, please talk to me 😊

I dno if this has anything to do with this but yesterday and today my pm system seems to have stopped working. When i try go into it says:

Internal Server Error

The server encountered an internal error or misconfiguration and was unable to complete your request.

Please contact the server administrator,

This e-mail address is being protected from spambots. You need JavaScript enabled to view it

and inform them of the time the error occurred, and anything you might have done that may have caused the error.

More information about this error may be available in the server error log.

I've checked on both my laptop and my computer but it says the same thing. It was okay for a while this morning but it seems to have just died again D: D: Happens at the worst of times as well

This is probs classed as whoring but I wanted it to be seen 😊
sorry for posting it in the wrong place at first
