

## site speed

Posted by Tunes - 20 Dec 2011 01:32

---

Well, had to rollback to a database from saturday, prior to the migration, for some reason, things were messed up a bit, so not much is lost, sorry for the inconvenience... 😞  
but really had no other method.

so looks like everything is fixed, at least what I've tested, looks fine

However, CS:S server still need reconfig...

And the fb like button works again.. so please.. 😊

there is an intermittent problem with the community mod on the site, have no idea yet what causes it...  
atm busy with another migration, involving this site again, if it gets fixed or not, atm I can't tell.

It affects also logins, I know is a pain.. sorry.

no worries m8 , just glad things are moving along , hope you get sorted soon for your own sake lol. 😊

Well, now it does work, but it takes a hell long, please try out something, log off the site, clear any cookies and login again.

Sorry folks this is taking long, problem is, the process processing the php bails out without any comprehensive error making it harder to find...
