

[Sorted] Potential Security Issue

Posted by sh4z - 24 Apr 2013 10:00

Cheers! 🍷

⚠️ Warning: Spoiler!

Don't know if your aware already but www.twkgaming.com has been purported to be an attack site or distributing badware. I dunno if there's any truth to it (I haven't caught anything or seen anything suspicious happening client-side) I strongly doubt anythings up so I'm not particularly worried personally. But yeah! I don't know if safebrowsing has checked this out properly or it's a false positive or someone has just reported it for shits and giggles but its sorta bad. Anyways server owner needs to go through some rigamole to get this sorted.

You can see this here; IDK 'bout you guys, but this seems pretty important?
