Opensource for upload manager?

Posted by liger - 20 Feb 2011 03:01

_____

I was wondering if there is an easy solution for uploading files to my own server? Right now i have a php page with max limit of 100mb.

Id like to have something with bigger limit and a progress bar 😊
(think among the lines of rapidshare and megaupload)

This is for personal use, where i upload files or images for "noobs" or to post on forums

So is there some opensource thingy i can grab which will end with simple url and UI?

_____

I would start here

devsnippets.com/article/7-free-powerful-file-managers.html

I don't use any... as I use scp to move things around locations, even the web, or i case of images, I use gallery as you can see it on my site...
