Hey mate, you do make awesome dark designs!

Well, without pushing too much, could you do whenever you have the time, two banners ideas like this

```
+++++
|                                     |
|   where ever you place it, I sign [TuNeS]   |
|                                     |
+++++
```

In a convenient banner sized pic

I intend to change my personal (rather dead) site luisantunes.pt into black grey white colors, why? I have photos and I intend to post walls of text in howtos'n'stuff, for me, its both topics that should be presented without distracting colors or page elements, so black grey white for me is the way to go.

I would really thank it a lot! and if you pm your paypal, I might drop a gift 🙏
