

1:1 HDD copy software

Posted by liger - 26 May 2010 14:06

So i have here an HDD that is dying and I have a new one (same size)

what software should i use for 1:1 copy? (the old HDD will be replaced)

By 1:1 i mean bit by bit copy. So the OS and all the programs dont have to be reinstalled. After its done u just switch HDDs like nothing happened

Now i know this can be done automatically with raid etc, but its a one time thing

Any recomendations?

i used acronis (ghost32 hangs here, need to try some things out first i guess)

but hdd is really in bad shape couldnt do a full system copy (lots of unreadable parts)

so had to reinstall windows and copy pics etc manually
