WCS Server
Posted by Würzi - 14 Dec 2010 12:55

_____

Hello all,

some students of my university and i bought a server for our lan-partys. We made a normal cs-server on it. Now we tried to make a wcs server on it, but it didn't worked. We tried a introduction from the internet with the same result. Maybe the admin, who made the TWK WCS Server can give me a guidance how to make it, or can give me a link of a website where it's explained well (in englisch or in german).

Thank you 🙂

_____

WCS must be enabled in the threddsConfig.xml configuration file before it can be used. This is done by adding an allow element to the WCS element as follows:

   true

   ...

Once WCS is enabled, datasets can be configured to have a WCS access method in the TDS catalog configuration files similar to how other services are configured. The service element's serviceType and base attribute values must be as follows:

==
