

## New motherboard: asus p8p67 or gigabyte ga-p67a?

Posted by liger - 10 Apr 2011 09:55

---

Need new one (for few months now, been using my notebook)

I know quiet a lot about the pc components, but motherboards are still tricky.

2 things from experience:

1) don't buy MSI (just like I don't buy non-WD hdd)

2) buy >100 euro mark

I've never used Gigabyte, but did use Asus

Any suggestions between these 2 asus p8p67 or gigabyte ga-p67a?

=====

personally I'd go with the Asus. They're a decent brand, and always have a guarantee.

My entire PC studio is Acer branded (branch off Asus) and I've never had a problem.

however I have had issues with the Gigabyte brand before.

It mainly depends what you want to use it for, i.e. PCI-E slots, Cache, bus etc.

Acer is not a branch of any kind of Asus (branch of asus was ASRock, but has since gone solo and shifted from low-range to high end)

Mainly Acer is &quot;cheaper&quot; than Asus, or more mainstream if you will

Gigabyte is also decent but they tend to stick less features in same price category (at least thats the impression i have atm)

Also Asus' motherboard has EFI, anyone got experience with that? (replacement for BIOS)

Everything mobo related in my kingdom is asus 😊  
always above the 200€ price range... those are my two cents.
