Tweak CSS, LEGAL!

Posted by slaB - 23 Jan 2009 23:22

_____

This could be a little helper for those with bad latency/ping (Nil, DS and sometimes Ripper...lol). But it's kinda basic, but there is also explanations for most of the stuff regarding tweaking your latency in console. Take a look:

www.fishtankclan.com/e107_plugins/conten...ntent.php?content.44

ALSO!!::::::

I really recommend this GUI, which will tweak your CSS at the most! Also, this GUI is used in several leagues like CAL and CPL. This is a PRO GUI.

www.cevo.com/FILES/CEVO_CSS_GUI_v2.1.zip

When installing, there will be installed an uninstaller too so that is will be very easy to remove. Also, during the install, you get to choose if you want a constume CEVO background/font/fixed chatbox etc. I really like the whole package, but thats up to you. You should really do this, if you don't have a GUI already installed!

_____

The only fix to mine are the following...

Start menu -> Control Panel -> Add/Remove Programs -> Uninstall WOW

Start menu -> Control Panel -> Add/Remove Programs -> Uninstall Skype

Start menu -> Control Panel -> Add/Remove Programs -> Uninstall Ventrilo

Roll on TeamSpeak 3

isnt that the fix to life? :
although do it at your own risk WOW players these days are a bit angry if you touch there
"precious"

_____

I quote from 2 WoW Players here:

'All Warcraft is, is hammering the f*ck out of 1 [The key one obviously]'

Sounds easy to me....

WOW Indeed is the desease
:D)

Someday i'll open a clinic to help those poor people
:D

will give it a spin so see if it helps something about my lack of ability to play, latency is the bigger problem imo
