

Major CSS problem

Posted by slaB - 01 Feb 2009 17:49

Hi,

Everytime I join this server in CSS, I have to redownload everything! (Sounds, Skins etc). It's like it's storing itself in a tempfolder and gets deleted when leaving the server.

And when it comes to downloading a costume map, it says it's missing, disconnecting.

Vista 32bit

sv_downloadurl is correct

sv_allowdownload 1

cl_downloadfilter all

I own the folder where the files are to be stored, and the permissions is correct too, in that folder.

Wtf is this? I have googled this, but no one seems to have solved this puzzle yet.

Err, first time I have heard about this mate...

Sorry but all you mention seems correct... so i would reinstall it? delete everything then reinstall, I know its a pain, but only option I can think of. I had another issue when i installed vista 64 for the first time, it would crash like hell, never got around to figuring the issue as I reinstalled vista and steam and it went

away 😞
sorry not to be able to help...

SOLVED! 🍌

I just found out that my firewall, Outpost Personal Firewall Pro (worlds best firewall!) was blocking the option to write/edit files in my steamfolder. I haven't really thought about that, since I allowed it when I first started CSS/DODS/HL2, I have to click "Allow ALL activity" in settings. YAY! 🙌
