

Internet :P

Posted by substick - 14 Jul 2011 18:10

Hello 🙋

I was just wondering if anybody knew if there was a site that I could test the internet connection I would get from different service providers 🙋

Earlier today my internet decided to die and I seem to have 150+ ping constantly on games, I was playing Starcraft 2 earlier and it was totally fine but now I lag constantly and disconnect 🙋

If anybody knows how I could fix this problem please post here 🙋
I have rebooted the router which didn't help and I also have reconnected all the cables and restarted both my computers 🙋

it seems you have a leecher on your internet but cant really say if that is whats happening my best bet would be that your isp is fucking up

just out of curiosity who's your isp?

Aol...

🙋
I wanna change but tbh I don't know if it is them causing the bad connection

Nobody else was in the house 🤔
and thanks for the website
supposedly TalkTalk would be the best internet for us 🤔

Hi Substick,

If its a leecher, thats easily solved... You need to change the code you use to connect to your router. Do you know your routers settings page in ie?

Let me know if you do, I will talk ya through it matey!

If it means me logging into my router I can't 🤔
It is my dad's business router, that his work gave him so we didn't get a user or a pass surprisingly 🤔
or maybe my dad just forgot it xD if it doesn't require me to login to my router then please tell me how 🤔
