

## So my SSD Failed

Posted by sh4z - 17 Feb 2013 04:14

---

Hi Everyone,

On Friday night my solid state drive died on me. Being the crazy guy I am it was running in a stripe (Which may turn out to be a good thing if I can get some useful data out of data recovery).

If anyone is interested the software I am using is called GetDataBack NT (Yes Ironic isn't it 🙄)  
) [www.runtime.org/data-recovery-software.htm](http://www.runtime.org/data-recovery-software.htm)

I went out and bought a replacement drive and everything's up and running again 🙄  
! The first Computer Store I went to didn't have the drive I wanted so rather than waiting I tried a different one, Score ^^

Got me one of these bad boys; [Samsung 840 Pro](#) (256GB)

So I thought I would post about it on TWK to give someone a chance to save their stuff! As a friendly reminder

**BACK UP YOUR DATA!!!** Before its too late! 🙄

The End 🙄

=====

Don't drive ssd's on stripes, mirror them. They fail quite more often than mechanical drives...

Every hd I have is ssd (laptop, netbook, desktop) and hd's can spin for years, ssd's died after two to 4 years...

And yes, always keep some backups around. 😊
