---

CSS wont launch.

When i try to open it it comes up with the 'Preparing to Launch' thing. Then the screen goes black as if it were launching. Then it goes back to steam games as if nothing has happened.

:S

Vapour that can also be turned off.

And its smart for me, the amount of protection im behind 🤖

you should always try and use at least 2 methods of protection.

double rubber? 🤖

omg this is so fail.

If i update drivers TF2 and CSS both have this flickery thing on the menu and crash as soon as i join a server.

If i rollback drivers TF2 works fine but CSS wont launch.

D:

Well, googled this 5e3v2e3b (yes its the google search)

prolly we need a few more bits, like, mobo, cpu and such, the problem is to vague...

try, disable antivirus, anything that could come on the way, ati control panel (I don't have ATI, vagon is best for this), start taskmanager (ctrl-shift-esc) and google any weird named process the way is appers on taskmanager, first links allways shows an answer for a problem.

not much we can help about it.
